City Begins Spring Water Main Flushing

BAINBRIDGE ISLAND, March 24, 2011 – The City of Bainbridge Island Water Utility crews began flushing water mains this week. Each year, the Public Works Operations and Maintenance water utility crews perform routine water main flushing in the spring. The process is generally completed by late May. On-site notices will be posted in the affected areas the day before flushing occurs.

During flushing operations, water pressures may fluctuate and water discoloration may occur. Customers are advised to wait until the flushing activities have passed their residence and then recheck their water pressure and/or flush their service lines by running cold water until it is clear.

The city appreciates your cooperation and apologizes for any inconvenience caused.
